Still suffering after treatment?

A specialist video visit within 7 days, not months. Treatment options have grown a lot, and many patients who failed one or two therapies still have good ones left.

Refer if any of these apply

Rheumatology

RA, psoriatic arthritis, axial SpA

- [ ] 3+ months on methotrexate or another DMARD and still active
- [ ] 2+ steroid courses this year, or can't taper off prednisone
- [ ] Stopped a medicine for side effects and is now on nothing
- [ ] Lost response to a biologic or JAK inhibitor

Gastroenterology

Crohn's disease, ulcerative colitis

- [ ] Diarrhea, urgency, bleeding or pain despite mesalamine or an immunomodulator
- [ ] 2+ steroid courses this year, or can't come off steroids
- [ ] ER visit, hospital stay, weight loss or anemia from IBD this year
- [ ] Lost response to a biologic

New patients with suspected RA or IBD who can't get a timely appointment are welcome too.

Escalate in four steps

1. **Send it**
   Fax or e-refer notes, meds and labs.
2. **We call**
   We call the patient within 1 business day.
3. **Specialist visit**
   Video visit in 7 days, full workup and plan.
4. **You get the note**
   Within 48 hours. The patient stays yours.

What to send: last office note; medication history (what was tried, how long, why it stopped); recent CBC, CMP and CRP/ESR; fecal calprotectin for IBD; the current specialist's notes if you have them.

Every patient gets

- A full specialist evaluation and a treatment plan: oral, self-injected or infused
- Coordination with their current specialist, if they want it
- Their own choice of where to receive any infusion. Noble Infusion is one local option.
